1 Introduction

The result of estimations of the broad-band longitudinal and transverse impedance of the SPring-8 storage ring is shown. The estimation scheme is given in ref.[1].

2 Dimension of Structure of Beam Pipe

Fig.1 ,2,3, Table 1,2 show the shape of discontinuities of the inner wall of the beam pipe of the storage ring[2].

Table 1. Dimensions of two-dimensional models of elements of the vacuum chamber.

3 Impedance

The impedance of the SPring-8 storage ring is summarized in Table 3.

The total impedance is

$$\frac{Z''}{n} = -0.127i + \frac{400}{n} + 1.3 \times 10^5 \frac{1+i}{n\sqrt{n}} [\Omega]$$

These values are valid at $\omega < c/d$, d is the depth of the grooves[3], such as flanges, weldments and offsets shown in Fig. 1. In our case, d~2mm and c/d ~ 150 GHz.

The loss parameters and the parasitic loss power caused by them for different bunch length is shown in Table 4,5 , respectively.

The expected natural bunch length is 3.5-5mm[4].
