

Contents

1	Executive Summary	5
2	Overview of the SPring-8 Upgrade Plan	8
2.1	Motivation for the SPring-8 upgrade	8
2.2	Key concepts of the upgrade	10
2.2.1	Ultimate storage ring	10
2.2.2	Synergetic use with the X-ray Free Electron Laser, SACLA	11
2.2.3	Energy-efficient facility	12
2.3	Pioneering science using the upgraded SPring-8	12
2.3.1	Resolving the hierarchy within systems using diffraction limited X-rays	13
2.3.2	Statistical analysis using intense brilliance of X-rays	13
2.3.3	New Sciences enabled by two ultimate light sources	14
2.4	Status of Other Light Source Facilities	14
2.5	Contents of the report	15
3	Scientific Vision for the Upgraded SPring-8	18
3.1	Comprehensive study of hierarchy in material and biological systems	18
3.1.1	SPring-8 II illuminates hierarchy and inhomogeneity	18
3.1.2	Static and dynamic structural biology	20
3.1.3	Higher-order structures of relaxor ferroelectric	24
3.1.4	Nucleation and clustering	25
3.1.5	Photochromism of functional organic materials at the molecular level .	27
3.2	Statistical characterization of inhomogeneous system	28
3.2.1	Access to inherent diversity	28
3.2.2	Organisms	29
3.2.3	Environmental science	31
3.2.4	Quick and fine screening of synthesized materials	33

4	Synergy with X-ray Free-Electron Laser	38
4.1	Introduction	38
4.2	Atomic resolution imaging	39
4.2.1	Correlative imaging in protein nanocrystallography	39
4.2.2	Coherent diffractive imaging of non-crystalline samples	41
4.3	X-ray pump-probe experiment	42
4.3.1	Exploring elementary processes in highly-excited matters	42
4.3.2	Coherent optical processes in the hard X-ray region	44
5	Accelerator Design	47
5.1	Accelerator Overview	47
5.1.1	Scope of SPring-8 II Accelerator Complex	48
5.1.2	Basic Constraints and Design Criteria	48
5.1.3	Design Goals for the Upgraded Accelerator	50
5.2	Conceptual Design of the Accelerator	51
5.2.1	Storage Ring Lattice	51
5.2.2	Technology Developments	57
5.3	Short Pulse Options	73
5.4	Design Alternatives	75
6	Light Sources and X-ray Optics	80
6.1	Light Sources	80
6.1.1	Basic Policy on ID Specification	80
6.1.2	Hard X-ray Beamline	82
6.1.3	Soft X-ray Beamline	83
6.1.4	New Category Beamline	84
6.1.5	Expected Light Source Performances	85
6.1.6	Recycle of the Existing IDs	89
6.1.7	Beam Stabilization	90
6.1.8	Summary	91
6.2	Front end	91
6.2.1	Handling of high heat load	92
6.2.2	Pulse-by-pulse monitoring of X-ray beam position	92
6.3	X-ray optics	93
6.3.1	Monochromator	93
6.3.2	Mirrors for higher-harmonic rejection	95
6.3.3	Nanometer-focusing mirror optics	96
6.3.4	X-ray beam position monitor	97
